

STEEL ROAD PLATES

STEEL ROAD PLATES CAN BE USED FOR VARIOUS APPLICATIONS, FROM DRIVEWAY ACCESS TO A LARGE TRENCH CROSSING.

Shore Hire carries a vast range of Steel Road Plates. They can be used in various ways on construction sites, from driveway access for cars, and large trench

crossings for construction site traffic, to covering roadway pits. Shore Hire's Steel Plates are equipped with a centre lifting device, which promotes efficient and safe Steel Plate installation and removal. Using the lifting device negates manual handling or the need to use a crowbar to gain access for lifting.

STEEL ROAD PLATES
