

# GRIP SHORE

## GRIP SHORE TRENCH BOX

A versatile shoring solution designed to be used in shallow trenches for the safe installation and maintenance of utilities in excavations up to 2.0m deep. With trench widths from 0.63m to 2.0m and with the use of hydraulic struts this creates a positive pressure that provides a very safe trench for small jobs that need the utmost of safety.

The Grip Shore Trench Box can be assembled on site in minutes. Its light weight means the smallest of machines can be used to access the most difficult sites where other shoring just cannot reach. Easily transported on most trailers and vehicles so transport costs are kept to a minimum.

### FEATURES

- Lightweight
- Easily transported
- Simple assembly
- Hydraulic struts
- Electrically non-conductive
- Access to difficult places
- Fire retardant

## GRIP SHORE SPECIFICATIONS

Length	1500mm
Height	1500mm
Min Width Internal	500mm
Max Width Internal	2700mm
Clearance Between Struts	1250mm
Clearance Under Bottom Strut	500mm Min
Weight With 900.1 Struts	80kg
Working Load Limit	15kPa

Note: Specifications are approximate.
