TECHNICAL DATA

Description

The Shore hire corner post system is used where a four sided shoring setup is required. The corner post system is compatible with Shore hire 4M-60 Trench boxes Upper Panels only and is limited to a rated capacity of panel of 30kPa.

This four sided corner post setup is extremely robust. Each individual corner post spigot bracket weighs 98kg. A pair of corner bracket connects spigots of 2 Upper panels. 2 pairs of corner brackets are required for each corner to connect Upper panels using 2 spigots.

All the corner post brackets combined to form a 4 sided panel trench box will add significant weight to the over all setup. Thus, a large excavator or in some scenarios a crane may be required to install and remove this shoring solution.

Corner Post Bracket Assembly with 4M-60 Upper Panels
